## FIGURE 1A

Relationship between cell viability and VEGF production after treatment with curcumin analogs. RPMI 7951 human melanoma cells were treated with analogs for three days at concentrations of 5µM (A) or 20µM (B). Series II analogs (EF 15, A279L, and A279U) inhibit VEGF production without affecting viability.

Title: Curcumin Analogs with Anti-Tumor and Anti-Angiogenic Properties

Inventors: Snyder *et al*. Atty. Dkt. No.: <u>007157/270549</u>
